UNITA' 2 – Via XXIX Aprile 1

La Stocco F.lli è nata nel 1984 come azienda terzista a conduzione familiare.

Ha iniziato l'attività occupandosi di montaggio e piegatura di prodotti metallici per la casa e il tempo libero. Successivamente, seguendo l'evoluzione del mercato, si è specializzata con successo nella produzione di telai ed elementi d'arredo, per lo più in ferro, ma lavora anche materiali quali Inox e alluminio.

Negli ultimi anni l'acquisizione di attrezzature ad alta tecnologia e produttività ha permesso di proporre una serie di prodotti nuovi, facendo della versatilità produttiva e della qualità costante il punto di forza della Stocco F.lli. Sono stati inoltre introdotte modalità di esecuzione e materiali che aiutano l'economia circolare.

L'azienda offre al cliente non solo un prodotto, ma un intero servizio, che coniuga esigenze qualitative, quantitative, design e tempistica a prezzi competitivi.

Attualmente l'attività si svolge su tre unità operative diverse ma vicine (produzione di elementi in tubo / produzione di elementi in trafilato e lamiera / magazzino di imballo e logistica), per un totale di oltre 10.500 mq coperti e altri 15.000 mq scoperti.

Per la lavorazione si parte dal tubo grezzo con diametro di max 150 mm o dal trafilato (da d.4 mm a 14 mm) o dalla lamiera da 0,5 a 25 mm.

L'elemento viene tagliato a Laser, piegato, stampato (tutto con macchine a controllo numerico) e i particolari ottenuti vengono assemblati con l'ausilio di robot antropomorfi per saldature a MIG.

E' stato acquistato anche un robot Cobot per le tirature basse come pure un robot di puntatura a proiezione di grandi dimensioni per trafilato fino a d.12 mm, con area di lavoro di 3000x3000 mm.

L'azienda è attrezzata per eseguire saldature con sistemi TIG, Castolin e con la più moderna tecnologia LASER.

La fase finale prevede finiture come pulitura, cromatura, doratura, verniciatura, cataforesi, zincatura, tutte operazioni fatte esternamente da fidati collaboratori.

Montaggio (di eventuali legni, imbottiture, intrecci, plastiche, etc) , stoccaggio e spedizione completano il ciclo.

In questi anni la Stocco F.lli ha prodotto telai e particolari d'arredo in esclusiva e non per rinomate aziende del settore, sia nazionali che estere per milioni di pezzi; attualmente il mercato è sviluppato in 18 paesi del mondo.

La presenza costante dei soci e la disponibilità del team, che da sempre contraddistinguono la ditta, permettono di offrire al cliente risposte affidabili e certe.

Stocco F.lli was founded in 1984 as a family-run company that worked for third parts.

It started the business dealing with assembly and bending of metal products for home and leisure. Successively, following the evolution of the market, it has successfully specialized in the production of frames and furnishing elements, mostly made of iron, but it also works materials such as stainless steel and alluminium.

In recent years, the acquisition of high-tech and productivity equipment has made it possible to propose a series of new products, making production versatility and constant quality the strong point of Stocco F.lli. Execution methods and materials that help the circular economy have also been introduced.

The company offers the customer not only a product, but an entire service, which combines qualitative, quantitative, design and timing requirements at competitive prices.

Currently the activity takes place on three different but close operating units (production of pipe elements / production of drawn and sheet metal elements / packaging and logistics warehouse), for a total of over 10,500 covered square meters and other 15,000 uncovered square meters.

For the processing, it starts from the raw tube with a diameter of max 150 mm or from the drawn (d.4 mm to 14 mm) or the sheet metal from 0.5 to 25 mm.

The element is laser cut, bent, printed (all with numerical control machines) and the obtained parts are assembled with the help of anthropomorphic robots for MIG welding.

A Cobot robot was also purchased for short runs as well as a large projection-type robot for drawn products up to d.12 mm, with a working area of 3000x3000 mm.

The company is equipped to perform also welding with TIG, Castolin systems and with the most modern LASER technology.

The final phase includes finishes such as polishing, chroming, gilding, painting, cataphoresis, galvanizing, all operations done externally by trusted partners.

Assembly (wood, pads, weave, plastics, etc.) , storage and shipping complete the cycle.

During these years, Stocco f.lli has produced frames and furnishing details exclusively and non-exclusively for renowned companies in the sector, both national and foreign, for millions of pieces; currently the market is developed in 18 countries around the world.

The constant presence of the partners and the availability of the team, which have always distinguished the company, allow it to offer the customer reliable and certain answers.
